## Technical Excellence. Customised Solutions. Personal Service.

For well over a decade, Base Information Systems has been specialising in custom-building software systems for business. We define the requirements, design the system, build it, test it and support it. Our principals have more than 20 years of hands-on experience in software development.

## End-to-end business software development services.

### Services

Combining our technical skills and proven experience, Base offers an end-to-end service to provide your business with a high quality, cost-effective software solution.

[See samples of our clients and their projects](#)

From process management, system integration and messaging, to data collection, information management and much more, our strength is translating your business objectives into smart, effective and user-friendly software systems.

When collecting your initial business requirements we take the time to truly understand your business. Once we know exactly what the software system needs to do, we can move into the design, development and implementation process. During this stage, we will also undertake extensive testing to ensure the solution does exactly what you want it to do.

And it doesn't end there. After implementation, Base will support and maintain your system, and add any additional requirements as your business needs change.
